Project Name: TBD

Project Location: TBD

Subject: Contribution of GreenGuard® Building Wrap Products to LEED™ Credits

This letter is in reference to your recent request for information regarding the contribution of GreenGuard Building Wrap Products towards LEED credits. As you are probably already aware, the LEED Green Building Rating System is a tool that enables a design professional to accumulate credits for a specific building based on meeting certain criteria relating to the use of environmentally preferable, sustainable and energy efficient building materials and systems. GreenGuard Building Wrap Products can contribute to achieving LEED rating points in the following categories:

Energy and Atmosphere (EA) – Credit 1 (Optimize Energy Performance)

Requirement: 2-10 points depending on the percent reduction in energy use based on ASHRAE/IESNA Standard 90.1-1999 or local energy code, whichever is more stringent.

Building Wrap Contribution: GreenGuard Building Wraps reduce unwanted air infiltration into the wall cavity, thus helping to protect the installed R-value of insulation regardless of the type or thickness of the cavity or sheathing insulation.

Materials and Resources (MR) – Credit 5 (Local/Regional Materials)

Requirement: 1-2 points dependent upon 20% of all materials manufactured regionally, within a 500-mile radius of the project.

Building Wrap Contribution: The GreenGuard Building Wrap Products intended for use on the specified project are manufactured in Winchester, VA, which may be within a 500 mile radius of the project specified above.

GreenGuard Building Wrap Products do not contribute points for post-consumer (PC) or post- industrial (PI) content. The raw materials are sourced globally and therefore do not contribute points for locally harvested materials.

Sincerely,

Craig D. Lynch
Manager, Technical Sales
